

Photosynthesis and Cellular Respiration Kit

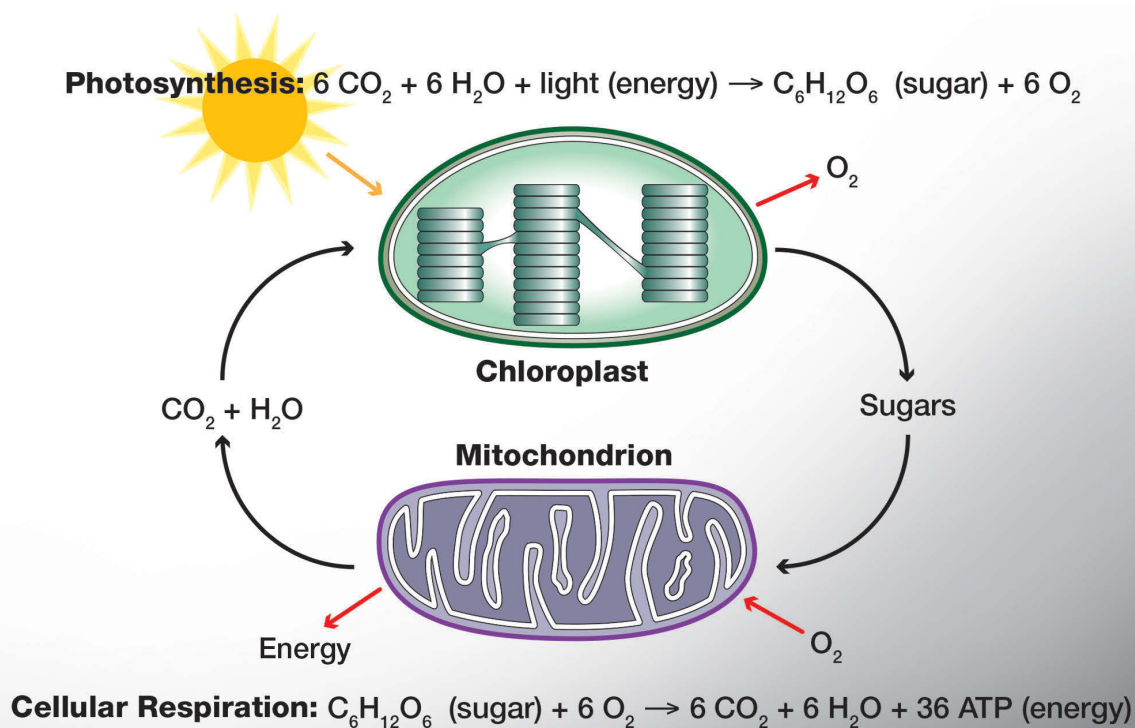

Introducing Bio-Rad's New ThINQ! Investigation

Do your students think that plants only conduct photosynthesis and only animals conduct cellular respiration?

This new ThINQ! Investigation can help you break through this misconception. Students will explore photosynthesis and cellular respiration using easy-to-handle algae beads and a simple colorimetric assay. The Photosynthesis and Cellular Respiration Kit will be available this winter! Visit bio-rad.com/algae2 for more information.

Instructions for backside: 1. Fold into an accordion on the dotted lines. 2. Place face up on a flat surface. 3. Adjust the angle of the accordion folds until you see the complete image. 4. Turn 180° to see second image.

BIO-RAD

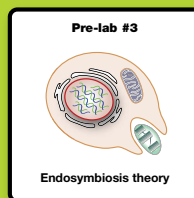

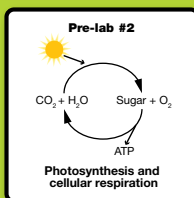

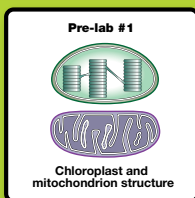

"I love that it is reusable. Students could repeat labs, retest, and tinker. This is one of the best features of the kit."

The Photosynthesis and Cellular Respiration Kit

Includes: Supplies for six inquiry labs (32 students)

"I observed my students making great discoveries when collecting the information and evaluating the data."

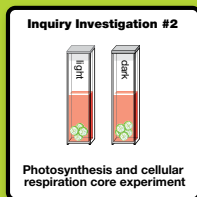

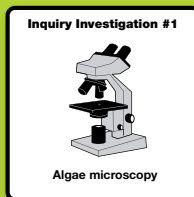

Concepts and Connections

Inquiry-Based Curriculum

"The algae beads distinctly show cellular respiration AND photosynthesis. There is no confusion."

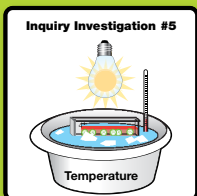

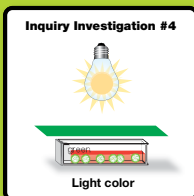

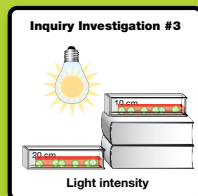

Structured Inquiry

Student Manual

"The Bio-Rad kit was simple and easy to run and maintain."

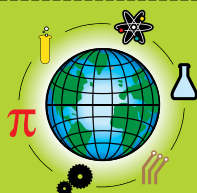

Open and Guided Inquiry

Instructor's Guide

What teachers are saying about this kit...
"This cellular energetics lab kit works consistently — it's the #1 reason this kit is the best!"
