

Platelia™ *Aspergillus* IgG Kit

The Right Test for the *Aspergillus* Antibody Detection

BIO-RAD

Platelia™ *Aspergillus* IgG Kit

Platelia™ *Aspergillus* IgG kit is the **Unique** assay using a **Recombinant** purified *Aspergillus* Antigen to Detect anti-*Aspergillus* antibodies

Aspergillus species are opportunistic pathogens that are responsible for a variety of chronic allergic or non-allergic pathologies in immunocompetent subjects: asthma, ABPA (Allergic Broncho Pulmonary Aspergillosis), extrinsic alveolitis (farmer's lung disease, bird-raiser's disease), aspergilloma, chronic necrotic aspergillosis.

The diagnosis of these various forms of aspergillosis often proves difficult since clinical signs and radiological examination may suggest other fungal and bacterial infections.

Consequently, serological tests are indispensable to support the diagnosis.

Platelia™ *Aspergillus* IgG kit is an indirect microplate immunoassay designed for the detection of anti-*Aspergillus* antibodies in human serum or plasma.

A unique assay using a recombinant purified *Aspergillus* antigen, this sensitive and specific test represents an excellent diagnostic tool for the detection of anti-*Aspergillus* antibodies in immunocompetent patients suffering from various forms of chronic aspergillosis.

Simple and Quick

- Standard EIA procedure
- 2h 30m turnaround time

Convenient

- 96 well microplate with breakable strips
- Ready-to-use: colored reagents (diluent, calibrators, conjugate, chromogen)

Secured

- Visual control of sample dilution
- Visual control of reagent deposit

Objective

- Results reported as AU/mL

Economical

- Reduced number of confirmation tests
- Improved laboratory workflow

Efficient

- Excellent sensitivity and specificity
- Faster initiation of appropriate treatment

Ordering Information

Catalog No. Description

62782	Platelia™ <i>Aspergillus</i> IgG Kit.....	96 tests
62786	Platelia™ <i>Aspergillus</i> IgG Negative and Positive Controls Kit	48 tests
